PRESSURE EQUALIZATION VALVE

Maßblatt: 4-R/917/91

Area of application:

To ensure pressure compensation (according to VGB 112) during pneumatic filling of silos and containers.

Supplied in DN 200 nominal width.

Layout and operating principle:

Response pressure is adjusted over sliding weights.

Low pressure: 5 to 13 mbar.

High pressure: up to max. 40 mbar.

Option:

Spring-loaded pressure equalization device (DN 250) available as a cost-efficient alternative.
